## Habitat

Green tree frogs are native to Australia and New Guinea. They typically live in trees and shrubs in rainforests and open woodlands. They are also found in urban areas, where they can be found in gardens, parks, and even people's homes.

When breeding green tree frogs, it is important to provide them with a habitat that is as close to their natural habitat as possible. This includes providing them with a terrarium with plenty of space to move around, as well as a variety of plants, branches, and rocks to climb on.

## **Diet**

Green tree frogs are insectivores, which means that they eat insects. In the wild, they typically eat crickets, flies, moths, and other small insects. When breeding green tree frogs, it is important to provide them with a diet that is as close to their natural diet as possible. This includes feeding them a variety of live insects, such as crickets, dubia roaches, and mealworms.

## **Reproduction**

Green tree frogs typically breed during the rainy season. The male frogs will call out to attract the females. Once a female is attracted to a male, she will lay her eggs in a nest that is made of leaves and other vegetation. The male frog will then fertilize the eggs.

The eggs will hatch in about two weeks. The tadpoles will then grow and develop in the water. After about six weeks, the tadpoles will metamorphosis into adult frogs.

## **Care**

Green tree frogs are relatively easy to care for. However, there are a few things that you need to do to make sure that they stay healthy and happy.

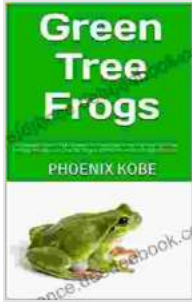

- **Provide them with a proper habitat.** This includes providing them with a terrarium with plenty of space to move around, as well as a variety of plants, branches, and rocks to climb on.

- **Feed them a balanced diet.** This includes feeding them a variety of live insects, such as crickets, dubia roaches, and mealworms.
- **Keep their water clean.** This includes changing their water every day and providing them with a filter to keep the water clean.
- **Provide them with a warm environment.** Green tree frogs are tropical animals and they need to be kept in a warm environment. The ideal temperature range for green tree frogs is between 75 and 85 degrees Fahrenheit.

Breeding green tree frogs can be a rewarding experience. However, it is important to do your research and make sure that you are prepared to provide them with the proper care.

If you are interested in learning more about green tree frogs, there are a number of resources available online. You can also find green tree frogs for sale at most pet stores.
